Power Source	Solar Power
Battery	800mAh NiMH AA Battery (Built-in)
Charging Time	6-8 Hours
Working Time	10-12 Hours
Light Source	Warm White LED
Waterproof Grade	IP65
Outer Material	PC/ABS

EASY TO USE

1. Rotate the lampshade and open it

2. Turn ON the switch, then close the lampshade

3. Expose panel to full sun for 6-8 hours

4. Cover the panel to check if the light works right

5. Connect the poles and spike

6. Insert into soft ground

NOTES

1. Before installation, make sure to turn on the switch under the solar panel to enable charging.
2. Please charge the solar light under direct sunshine without shelter at least 6-8 hours for the first time use, avoid placing the solar lights near trees or near roof coverings.
3. Please do not install them in areas that are bright at night, or near each other. Solar lights will not work in areas with bright light.
4. In cloudy weather or winter, charging time may be longer and working time maybe shorter, which is normal for solar lights and should not be considered as quality problem.
5. If the battery runs out, the light may dim or flash, but it will work normally once it is fully charged.
6. If the ground is too hard, do not insert it into the ground forcibly, please try to soften the ground with water and use the shovel to avoid the stake breaking.

WARNING

1. Avoid disposing of the product in fire.
2. Do not soak the product in water.
3. Do not disassemble the solar panels.
4. If you are not going to use the product for an extended period of time, turn off the switch and store it in a cool and dry place.
5. Regularly charge the product to protect the battery if you have not used it for a long time.
